***Response to Response***

The Declaration of Prior Invention in The Unit States filed on January 15, 2002 under 37 CFR 1.131 is sufficient to overcome the Eng (U.S. Patent No. 6,145,117) reference.

***Information Disclosure Statement***

Receipt is acknowledged of the Information Disclosure Statement (IDS #3), filed on August 20, 2001.

***Claim Objections***

Claims 1, 20, 32 and 51, the phrase “allocating A PORTION of an area of said IC to a SPECIFIC PORTON” is unclear to what application intends to mean. Correction is requested.

***Claim Rejections - 35 USC § 102***

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-73 are rejected under 35 U.S.C. 102(b) as being anticipated by Beausang et al. (U.S. Pat. No. 5,696,771).

Beausang et al. disclose a method and apparatus for performing partial unscan and near full scan within design for test application comprising: a display device 105; a memory (102, 103 and 104); a processor 101 coupled to the memory and to the display device, the processor allocating a specific portion of a technology independent RTL (register transfer level) netlist to a portion of the IC, the technology independent RTL netlist being stored in the memory, wherein the processor compiles a hardware description language (HDL) code to produce the technology

Art Unit: 2818

independent RTL netlist and wherein the allocating restricts circuitry created from the specific portion to the portion of the IC; wherein the IC comprises one of a programmable logic device or an ASIC or wherein the processor maps the technology independent RTL netlist to a selected technology architecture, wherein the processor maps the technology independent RTL netlist after the processor performs the allocating, wherein the processor performs a place and route operation after the processor maps the technology independent RTL netlist, wherein the place and route operation creates a representation of circuitry in the selected technology architecture, wherein the processor optimizes a design of the IC after the processor performs the allocating, wherein the processor maps the technology independent RTL netlist after the processor performs the allocating or wherein the processor maps portions of the technology independent RTL netlist to the selected technology architecture to generate estimates of IC resources, wherein the processor maps the portions after the processor compiles the HDL code, wherein the processor displays the estimates on the display device and stores the estimates in the memory, wherein the processor displays graphical representations of the area of the IC on the display device and displays on the display device representations of portions of the technology independent RTL netlist and wherein the processor performs the allocating in response to a command from a user, wherein estimates of area requirements of the portions of the technology independent RTL netlist are displayed on the display device (col. 8, lines 8+; col. 14, lines 9+ its related description).

### ***Conclusion***

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.
